

NowBookIt Gift Card Configuration Guide

19/01/2022

V1.0

Introduction

This document describes the integration between Tevalis and NowBookit. Included in this documentation is all configuration required by the integration.

NowBookIt is a voucher/gift card system that allows the sale/redemption of a voucher. The integration communicates over the internet using a Web Service to access the NowBookIt server(s).

Configuration

NowBookIt is part of the TevalisGiftCard standardisation and therefore works the same as other TevalisGiftCard integrations.

System Settings

Setting Name	Value
ITevalisGiftCardEndpoint	The base endpoint of the integration to communicate with.
ITevalisGiftCardToken	The api key to connect to NowBookIt with. This usually differs per company as this limits us to what properties/locations we can access.

Function Keys

Function Name	Description
Integrated Voucher Balance Enquiry	Allows the user to query the balance of a gift card by the redemption code.
Integrated Voucher Redeem	Allows the user to redeem a gift card.

Tenders

Payment Method	Description
Integrated Voucher	Allows the user to lookup & redeem the voucher.

Support

Debugging

All calls to/from NowBookit are stored in the IntegrationDebug log file. These files contain both the request and the response and is grouped together in singular requests. Any errors are written to the error log.
